RE: Valued Partner

San Luis Obispo, July 19, 2012

To Whom It May Concern,

Solar Electric Supply, Inc. is an authorized value-added reseller of REC photovoltaic modules in the Americas, and is a valued and tenured partner. It is with sincere appreciation that we provide this endorsement, and look forward to many more years of bringing REC solar energy to the mainstream with the assistance of Solar Electric Supply's (SES) educated, committed, and competent staff.

With specific reference to projects in Hawaii, REC would like to make reference to a 1.21MW PV power plant which was commissioned in February of 2011 above old Kapa'a Town on the windward side of Kaua'i. This system was the largest of its kind in the state of Hawaii at its completion, the first of its kind on Kaua'i, and feeds power to the Kaua'i Island Utility Cooperative's grid, which is generated by 5,376 of our Peak Energy modules. In addition SES also recently provided the engineering and material for a 500KW system for the US National Guard in Bethany Beach, Delaware. SES time and again undertakes some of the most challenging projects with a very high measure of success ensuring the projects go to fruition where others simply could not.

We are committed to the furthering of renewable energy in the US, and will support these efforts with any resources we are able to mobilize.

Best regards,

Christopher Masys
